FULL-STACK DEVELOPER | DATA ENGINEERING | AI INTEGRATION | CLOUD & DEVOPS

PROFESSIONAL SUMMARY

Full-stack developer with strong capabilities in data engineering, AI integration, and cloud deployment. Experienced in building production-ready applications across AI-powered tools, ETL pipelines, low-code enterprise systems, and multi-cloud environments. Skilled in PostgreSQL database design, backend development with Python/FastAPI, and deploying containerized applications using Docker and Kubernetes.

Demonstrated ability to design normalized relational schemas, build automated ETL pipelines, integrate generative AI APIs, and deploy scalable applications across AWS and Azure.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, HTML5, CSS3

Backend: FastAPI, PostgreSQL, SQLAlchemy, REST APIs

Frontend: React, JavaScript, Streamlit

AI/ML: OpenAI API, Gemini API, Groq API, Prompt Engineering

Data Engineering: ETL Pipelines, Pandas, Data Cleaning, CTEs, Stored Procedures

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Azure (App Service, SQL DB, Blob Storage), Docker, Kubernetes, CI/CD (GitHub Actions)

Low-Code & Tools: Power Apps, Power Fx, Microsoft Power Platform, Git, GitHub, Jira, Vercel, Netlify

PROFESSIONAL EXPERIENCE

Software developer at e-Funda LMS 2025

- As a software developer for eFunda, my key responsibilities include designing and developing an interactive e-learning platform that enhances the educational experience for students, teachers, and parents. I will leverage modern programming languages and frameworks to build core functionalities, ensuring a seamless user interface and engaging multimedia content.

- Collaboration is central to my approach; I will work closely with educators to gather feedback, enabling the platform to meet specific educational needs. Additionally, I will implement robust data management systems, providing real-time analytics to track student progress and enhance teaching strategies.

Project Y | Full-Stack Development 2025

- Completed intensive full-stack and cloud engineering training focused on production-ready applications.
- Built and deployed full-stack applications integrating AI APIs, PostgreSQL databases, and cloud infrastructure.
- Designed ETL pipelines and implemented SQL analytics including joins, CTEs, views, and stored procedures.
- Deployed containerized applications using Docker and Kubernetes with CI/CD automation via GitHub Actions.
- Gained hands-on experience across AWS and Azure environments.

Full-Stack Developer – Student Records Management System *December 2025*

- Built a complete relational database and analytics system using PostgreSQL and Python as part of the IBM Data Engineering Professional Certificate.
 - Designed a fully normalized relational schema managing students, courses, enrollments, grades, and attendance.
 - Enforced referential integrity using foreign keys and constraints (NOT NULL, UNIQUE, CHECK).
 - Developed an automated ETL pipeline using Python, Faker, and batch loading techniques.
 - Generated 300+ student records and 25+ course datasets programmatically.
 - Implemented validation logic for email formats, grade ranges, and attendance aggregation.
 - Built SQL views including student transcripts and attendance summaries.
 - Developed stored procedures and functions including safe enrollment logic and weighted GPA calculation.
- Created analytical queries identifying at-risk students (attendance <75%) and ranking top performers by GPA.
- Stack: PostgreSQL, Python (psycopg2, Faker, Pandas), SQL, pgAdmin
 - Github: https://github.com/MfobesTechJournal/student_records_management

Data Engineer – Data Pipeline Builder (NYC 311 Dataset) *November 2025*

- Designed ETL pipeline in Python to extract, clean, transform, and load public dataset.
- Performed SQL analysis using joins and CTEs.
- Loaded processed data into Azure SQL and Azure Blob Storage.
- Built Streamlit dashboard for data visualization.
- Stack: Python, Pandas, SQLAlchemy, Azure, Streamlit
- GitHub: https://github.com/MfobesTechJournal/nyc_social_services_311

Cloud Engineer – Multi-Cloud App Deployment *October 2025*

- Deployed AI chatbot application to AWS (Elastic Beanstalk, Lambda) and Azure App Service.
- Configured CI/CD automation using GitHub Actions.
- Containerized applications using Docker for consistent deployment.
- Stack: AWS, Azure, Docker, CI/CD
- GitHub: <https://github.com/MfobesTechJournal/Trivia-app>

Backend Developer – AI-Powered Low-Code App (Containerized) *September 2025*

- Built AI resume/job matcher with FastAPI backend and Appsmith UI.
- Integrated Groq API for intelligent job matching logic.
- Containerized application using Docker and orchestrated with Kubernetes.
- Stack: FastAPI, Docker, Kubernetes, Appsmith, Groq API
- Github: [MfobesTechJournal/BitTrio-Resume-Job-Matcher: An AI-powered tool that compares resumes against job descriptions to calculate match scores and identify skill gaps.](https://github.com/MfobesTechJournal/BitTrio-Resume-Job-Matcher)

Frontend Developer – AI Content Generator / Chatbot *August 2025*

-Developed a React web application integrating OpenAI API for dynamic content generation.

-Built responsive UI components and implemented custom prompt input handling.

-Deployed application to Vercel with environment configuration.

-Stack: React, JavaScript, OpenAI API, Vercel

-Github: https://github.com/MfobesTechJournal/Caption_Craft

CERTIFICATIONS

Coursera:

AI Engineering, Cloud Engineering, Data Engineering *October 2025* **DataCamp-** Full stack Engineer Career Path

Learn SQL, Node.js, Node SQLite, Git & GitHub, Bootstrap *May 2024* Learn JavaScript (Beginner & Intermediate), React (Beginner & Advanced) *April 2024* **FNB FullStack Academy-** Html, CSS, JavaScript.

EDUCATION

Cape Peninsula University of Technology *B.Tech Project Management December 2018*

SKILLS & INTERESTS

Skills: Communication, Adaptability, Teamwork, Critical Thinking, Empathy.

Interests: Full Stack Development, Frontend, Backend Systems, Data Analytics, Automation, AI Integration.

Additional: Fluent in English (written and verbal), dependable internet connection for remote work, fast learner with proven ability to adapt to new tech stacks and contribute meaningfully in remote, async teams.
